

Number	1	
Name	Hotel Booking Payment	
Summary	The user pays for a hotel room using a bank payment method.	
Priority	5	
Preconditions	The user has selected a hotel and room to book.	
Postconditions	The user successfully completes the payment and receives a confirmation.	
Primary Actor(s)	Traveler	
Secondary Actor(s)	Bank system, Hotel system	
Trigger	The user has chosen to proceed with payment.	
Main Scenario	Step	Action
	1	User initiates the payment process after selecting a hotel room
	2	The system displays available payment methods (Credit Card, Bank Transfer, etc.).
	3	User selects a payment method (e.g., Credit Card).
	4	The system prompts the user to enter payment details.
	5	User enters payment details and confirms the payment.
	6	The system verifies the payment details with the bank.
	7	If verification is successful, the system deducts the amount from the user's account.
	8	The system generates a payment confirmation receipt.
	9	The system sends a payment confirmation notification to the user.
	10	The system updates the hotel booking status as confirmed.
Extensions	Step	Branching Action
	6a	The system notifies the user that account fund are insufficient
	6b	System gives current account balance and decline the payment.
	6c	The system gives the user the option to retry with another method.
Open Issues	1	Should the system allow partial payments or installments?
	2	Should the system store payment details for future use?
